

We're all here.

Aparna made changes to the map UI. She's sending data back to some activity so we'll have to figure that out together. She may just store the address instead of lat/long

Jie got some stuff working and needs to integrate the functionality into the app.

Zarif got done the follow requesting. Nice.

John replaced a snapshot listener with whatever Nick had in his data management class.

Paola fixed and changed lots of backend stuff. Did some unit testing.

Nick added some progress indicators, and will use Zarif's circles later. Percent Complete can go above 100%, whereas consistency is 0-100%. We should store the consistency in the overall progress field. He added more stats at the bottom of the page with the graph.

Next Tuesday our TA may require a demo. He might just run the code we have in main. We're not sure. We can designate someone to do the presentation to show a step of steps that will work, and we run through and make sure the requirements are covered.

We're missing the image stuff, map stuff, reordering stuff, and private/public event sharing stuff.
