

We're all here.

Aparna picked an app logo. She got rid of the top bar.

Jie made some simple layout changes to the login and profile screen, and implemented feedback on the login screen.

Zarif added feedback to the search username screen. He also did a lot of work on the UML.

Paola worked a lot on the habit view screen. Lots of fancy buttons and stuff is centered and stuff.

Nick prettied up the Habits for Today list.

John implemented Jie's image code and it mostly works. Maps will also be integrated after Aparna merges with dev.

We're removing all the back buttons in our code.

When updating UI mockups, create an issue, in the commit message link to the feedback issue so they know we're addressing the TA's feedback.

For our presentation on Tuesday, we're just doing a live demo. The TA said to use videos, but the prof said we need a live demo so we'll just do that. 6 minutes. Each person gets a minute to talk. Quickly go through the app and show everything briefly.
