Nick, John, Aparna, Jie, and Zarif met from 12 PM to 2 PM

Zarif started a Figma to start planning the UIs. Nick already made a mockup of four screens which he pasted in and we discussed. We should have an option to hide a habit from people following so it's private. When clicking on a habit, we could edit it. Have a checkbox to make it private.

CRC cards can also connect with the storyboard to combine them and make it more visual. We might have extra ideas that might be nice to have that are beyond the requirements, but we shouldn't assume they'll give us extra marks. Check with the TA.

We thought to use a calendar to show how well we were following the progress over time for requirement:

US 01.09.01
As a doer, I want for each habit on the list, a visual indicator to show how closely I am following its plan over time.

But we decided to keep things simple and remove the calendar entirely.

Habit events. Beside each habit, there's a button "checkbox" to say that you did the habit. It'll create a habit event attached to that habit, with a date, geolocation, image, etc.

We can add an event list to show all the events, filter by which habit, etc. Not entirely in requirements.

Should we have to mark a habit as done only on days it's scheduled? Should we be able to do it late, or do it in advance? And if they do it on off-days but they're still doing it, that will complicate the calculation for how well the tasks are followed. Ask the TA.

The bottom bar can be common across the program, and we can make that later. Use placeholder for now.

For asking to follow someone US 05.01.01, there's a text box where we can type a username to follow. If they exist, it sends a request. If not, we get an error.

Colored stars on the diagram represent groups of screens someone can do together.

Aparna made icons using "Spotify green" for us (#1DB954)
